Practical Approaches to Teaching RE (and SE)

- Here are some **thought-provoking** considerations
    - On preparing and managing classes with a practical approach:
        - Time management issues
        - Amount of extra work
        - Students commitment ("too boring class" vs. "too much work to do")
        - "Make it look like a real project" vs. "Don't take it as a real project"
    - On assessments:
        - Must be made exclusively from the technical viewpoint?
        - Do soft skills play a role? As a bonus? As part of the grade?
        - Remote scenario: What are the implications?
