

Software Engineering

# ***Lecture Notes on CASE-Tools: Together***

**Christoph Vilsmeier  
Technische Universität München  
Institut für Informatik**

(based on slides from Günter Teubner)

**Friday, 10<sup>th</sup> Nov. 2000**

# ***Outline of the lecture***

- ❖ **What is CASE?**
  - ◆ **The acronym**
  - ◆ **Typical components of CASE tools**
- ❖ **Major goals and concepts**
  - ◆ **Lifecycle support**
  - ◆ **Roundtrip engineering**
- ❖ **Working with Together**
  - ◆ **Analysis**
  - ◆ **Design**
  - ◆ **Implementation**
  - ◆ **Documentation**

# ***What does CASE mean?***

- ❖ **The acronym CASE stands for**
  - ◆ **Computer**
  - ◆ **Aided**
  - ◆ **Software**
  - ◆ **Engineering**
  
- ❖ **CASE is the use of computer-based support in the software development process**

# What is a CASE Tool ?

- ❖ A CASE *tool* is a computer-based product aimed at supporting one or more software engineering activities within a software engineering process.
- ❖ In reality, often even tools which support only one particular part of this process (such as compilers, editors, UI generators) are called CASE tools.
- ❖ Our definition is: *CASE tools are browsers and editors for models in graphical and textual form.*

# ***What is a CASE Environment ?***

- ❖ **A CASE *environment* is a collection of CASE tools with an integration approach that supports the interactions that occur among the tools**
  
- ❖ **The interaction may be done by**
  - ◆ a shared database
  - ◆ a repository (checkin, checkout)
  - ◆ a message broadcast system

# ***Functionality of CASE tools***

## **❖ Typical functionality**

- ◆ browsing and editing of models with a graphical user interface**
- ◆ automatic code generation**
- ◆ documentation generation**

## **❖ Ideal functionality**

- ◆ consistency checks between diagrams**
- ◆ support of the whole software life cycle**

# ***Typical components of CASE tools***

## **❖ Project repository**

- ◆ persistent storage of all development documents**
  - Mockups, RAD, SDD, ODD, Meeting Protocols, Source Code**
- ◆ integrated version control system**
- ◆ concurrent, distributed modeling**

## **❖ Interface to other tools**

- ◆ software development tools**
- ◆ process and workflow modeling tools**
- ◆ offering a scripting language**

Analysis

Design

Implementation

Testing

Maintenance

# ***Current situation: Quality of support differs***

Not all aspects of the software engineering process are supported by today's CASE-tools !

❖ **Good support for**

- ◆ **requirements analysis (class diagrams, use cases, etc.)**
- ◆ **implementation**

❖ **Moderate support for**

- ◆ **system design**
- ◆ **testing**
- ◆ **maintenance**

❖ **Poor support for**

- ◆ **requirements elicitation**

# ***Level of integration***

## **❖ not integrated**

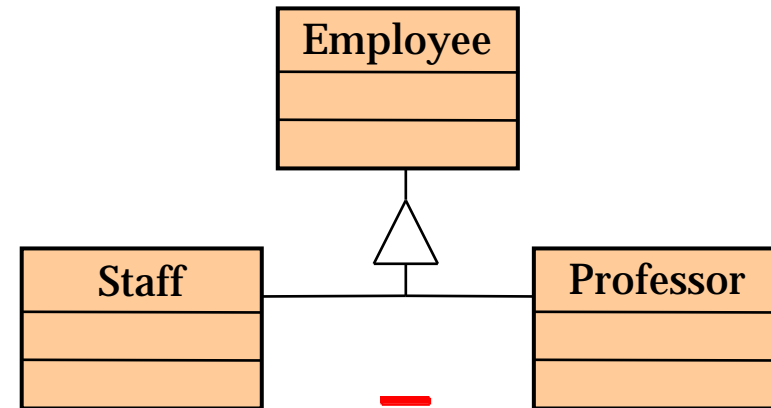

- ◆ separate CASE tools exist for different parts of the software engineering activities**
- ◆ each tool has its own set of project documents and a unique user interface**
- ◆ the user works with multiple tools**

## **❖ integrated**

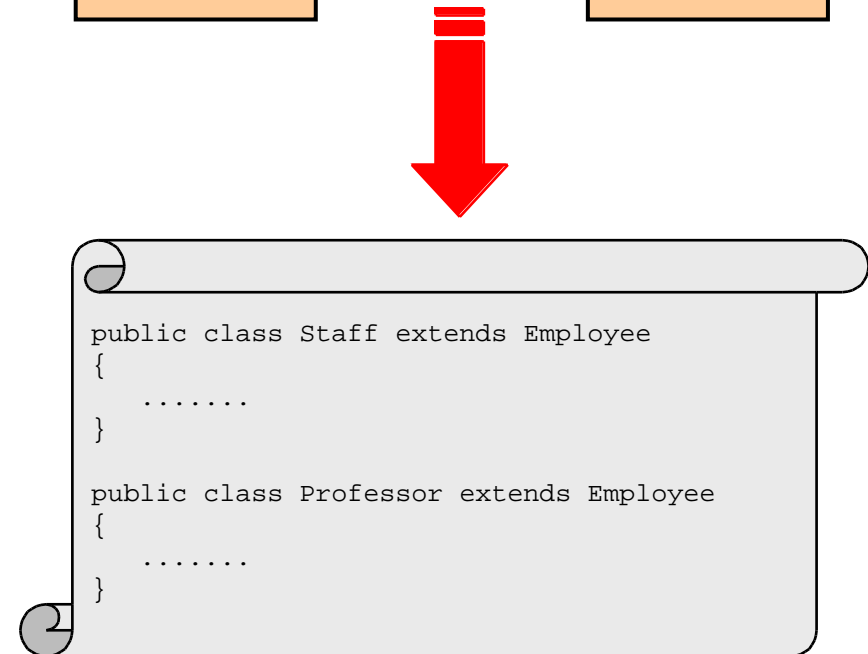

- ◆ all tools are working on the same project documents**
- ◆ a tool can trigger activities of other tools (e.g. start an formal integrity check after a model has been changed)**
- ◆ the tools share one common user interface**
- ◆ the user has the feeling of working with one tool**

# Forward Engineering

- ❖ Forward engineering is the generation of skeleton code out of the analysis or design models.  
The developer still has to write the bodies of the methods.

- ❖ Typical flow of events
  - Create or modify an object model for a system**
  - ◆ **Generate the code for this model**
  - ◆ **Allow external modification of this code**

# Reverse Engineering

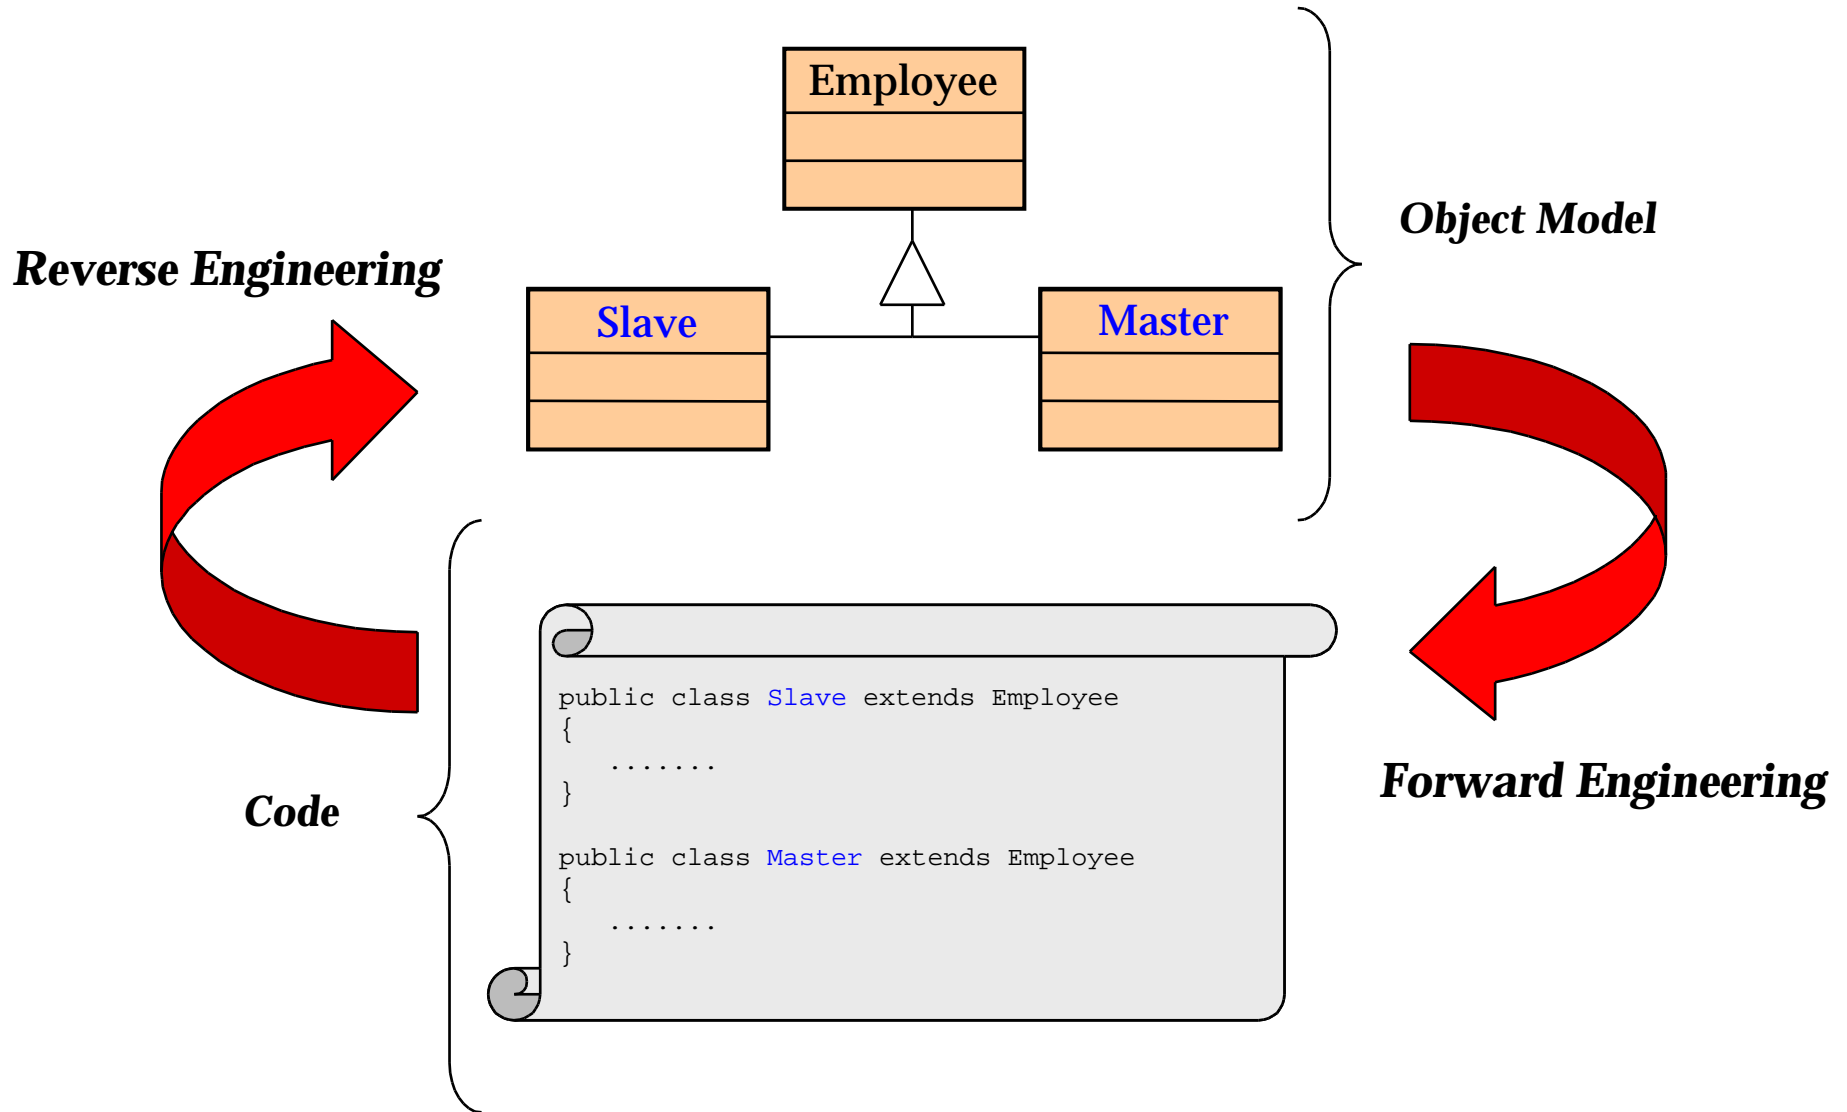

- ❖ Reverse engineering is the recreation of an analysis or design model from existing code.
- ❖ Typical flow of events
  - ◆ Scan a set of already existing source code files
  - ◆ Generate the object model for these files
  - ◆ Allow now modifications on this object model

```
public class Staff extends Employee
{
    .....
}

public class Professor extends Employee
{
    .....
}
```

# Roundtrip Engineering

# *Together*

- ❖ supports UML 1.3
- ❖ supports Java, C++, CORBA-IDL
- ❖ supports cvs integration
- ❖ supports forward and reverse engineering
- ❖ supports generation of documentation from the model
- ❖ written in Java (Windows, Linux, Mac, ...)
  
- ❖ A free version (whiteboard edition) is available at  
**`www.togethersoft.com`**

# *Online Demo*
